

# Technogym Ride

£3,990.00

## Product Images

## Short Description

As close as you'll probably get to outdoor cycling, the Technogym Ride is an indoor cycle that excels in all areas. From the build quality to the functionality and the interactivity, it really does have it all. The console provides you with 22" of HD quality and integrated apps for training like Rouvy, Zwift, Strava and of course the Technogym app.

But the key features of the Technogym Ride are the ability to experience slope resistance, change gears as with a road bike and watch your pedal power as an image to see how and exactly where you're powering your ride. Adjustable, comfortable and above all extremely high quality from Technogym.

## The Technogym Ride Experience

That's what it is - a true riding experience every time you train. With its fully integrated 22" display you can fully immerse in your now personalised workout experience. There's very little set up required, but you can adjust everything to get the most comfortable riding position.

With the responsive and natural pedalling system, adapting to the feel of your movements. It offers an incredibly realistic riding feel. Experience your favourite cycling routes on outdoor tracks, the gradient and speed of each is matched as you pedal.

## Key Features

- Easy to use - sit on and ride
- Gradient resistance controls through screen
- Shift gears using the configurable keys
- Outdoors Console feature, pedal using all the gears
- Create your own personalised workouts
- Versatile and easy to use gear ratios
